

The Checkin Transaction

In Open ACU you cannot edit transactions, checkins or otherwise.

When you [checkin a patient](#) into the schedule you are confirming their arrival and creating a financial transaction for their visit. This transaction is a standard debit and credit system that is associated with a patient. Let's look at the basic checkin window. (Click on the image to enlarge)

Charges	Amount
Treatment	20
Payment Total	0.00

Add A Note...

CreditCard

Save

Quick Checkin Tip

1. Enter the amount to charge for treatment (or leave it your default amount)
2. Tab once to total field and hit return.

Checkin Transaction Fields

- **Treatment Description.** This first line is always the treatment line and it cannot be deleted.
- **Treatment Amount.** This is what you charge for a treatment. It is not advisable to enter 0.00 because you will want to adjust the fee for any treatment with patient tokens or credit.
- **Payment Total.** This amount will be calculated automatically and should typically not be changed. If you enter a number higher or lower than the real total it will add credit or debit to the patient's account.

Adding Items to a Transaction

Sometimes you sell something other than a treatment to a patient when they visit. Open ACU allows a non-treatment transaction for when patients arrive and want to purchase something without having a treatment appointment. See the non-treatment transaction help for more. The transaction popup form allows additional lines to the transaction.

Treatment	20	+
-----------	----	---

Click the plus sign at the right of the treatment amount to add lines. This will add a new line. You can add a description and price. Click the red minus sign to delete the line from the transaction.

Books	35	-
-------	----	---

These lines add to the total due. Using a token for the transaction will only apply to the treatment amount.

Use Patient Token to Pay For Treatment

Use Token (15)	<input type="checkbox"/>
----------------	--------------------------

If a patient has at least one token they can use one to pay the treatment amount as entered in the transaction. This will adjust the balance of the transaction. Added line items total will remain and will need to be paid. Clicking Save will reduce the patient's tokens by one.

Use Patient Credit to Pay

Use Credit (\$75.00)	<input checked="" type="checkbox"/>
----------------------	-------------------------------------

If a patient has credit it will appear in the transaction. Credit can be used to pay for the entire transaction including extras and the treatment. If the credit is less than the total it will reduce the total transaction by the amount of credit and the rest will need to be paid.

When a Patient Has a Debit

Patients may have accumulated debit on their account when they were either unable to pay (as noted above) or from a no-show cancellation. When this happens a debit amount appears in the transaction. The transaction amount is increased accordingly.
