

Treatment Codes

Treatment codes are shorthand for the points that a practitioner uses most frequently. Each practitioner can create their own list of treatment codes. To do so, go to EHR -> Preferences.

Any time you add or remove codes, you must click Save Treatment Codes before navigating away from the page in order to save your changes.

Here's a quick video look:

To add a code, enter the point name/abbreviation in the empty Treatment Codes box:

Treatment Codes

Edit your premade treatment codes.

Enter code and hit return

Save Treatment Codes

Treatment Codes

Edit your premade treatment codes.

ST36

Save Treatment Codes

Once you hit Return, the code will be saved in your list:

Treatment Codes

Edit your premade treatment codes.

ST36

Enter code and hit return

Save Treatment Codes

To delete a code, simply click on the code abbreviation - this will remove it from your list of codes.

Remember, any time you add or remove codes, you must click Save Treatment Codes before navigating away from the page in order to save your changes.
